

Reabrook Limited is committed to conducting business in an ethical and socially responsible manner, as well as ensuring the effective management of environmental issues. We are focused on sustainable development in order to meet the needs of the present without compromising future generations.

We understand that our customers require more than just 'environmentally friendly' products. We are committed to producing chemicals that minimise the many environmental impacts that arise in making, transporting and using cleaning and hygiene products, such as energy consumption and waste disposal.

The following categories contain hard facts about our progress and commitments. We have tried to focus on objectives and achievements rather than buzzwords or environmental jargon. The following areas are our key targets:

- Our products
- Our manufacturing and logistics
- Our management systems and accreditations
- Our employees
- Our commitment to the future

Our Commitments:

Products

- Select and formulate ingredients to ensure safety and optimise the sustainability of our finished product during its life-cycle.
- Comply with The Detergents Regulations to ensure that our products are safe for people and the environment.
- Review human and environmental safety aspects of our ingredients and select materials to find the optimum balance between effectiveness, safety and environmental impact.
- Offer water based products as an alternative to solvent based and provide concentrated professional products to reduce our environmental impact.
- Our purchasing team is tasked to ensure that all paper based products are from FSC sources, that we use recycled material wherever possible and ensure that all packaging and components are able to be recycled.

Manufacturing and Logistics

- We are rigorous in ensuring that we minimise raw material and finished product waste.
- Reduce our consumption of energy and water further, having reduced our energy consumption per unit by 75% between 2007 and 2010.
- Implemented measures to control our emissions of solvent waste by using waste companies that recycle or re-use waste solvent as a raw material in other industries.
- Reduce aerosol waste by reclaiming 100% of waste aerosols for both tin-plate and aluminium and ensuring that any residual content can be reclaimed.

Management Systems and Accreditations

- Optimise the efficient and safe use of chemicals and minimise our water use.
- Continually improve and comply with the accreditations below.
- Registered and monitored to IPPC/EPR by the Environment Agency. Site is bunded and all drains have valves to insure that there is no risk of pollution of water.
- Water usage is measured and monitored, together with electricity and fuel oil, both of which have seen reductions of 40%+ in use per unit of manufacture.

Our Employees

- All employees, regardless of department, are tasked to reduce the environmental impact of our operations.
- Energy and Environment Team work with all employees to reduce waste and identify further ways to reduce our carbon footprint.
- All employees are active in ensuring that all waste paper and cardboard are recycled.

Commitment To The Future

- Continue to investigate further ways to reduce our consumption of water, fuel oil and the environmental impact of our transportation.
- Invest in warehouse lighting with light sensors to ensure energy is used only when required.
- We have made a commitment to support The National Forest by sponsoring the creation of 21 hectares (over 50 acres) of new woodland. This will form part of a 38 hectare (over 90 acre) development of new habitats, including parkland, grassland and wetland.
- We are also working with customers to reduce the number of deliveries we make.
- Continue in the development of products such as ECAD to meet the stringent requirements of HOCNF and OCNS. ECAD for safety in marine environments.
